^ Cumulative returns. The performance is calculated on NAV-to-NAV basis.

*Note: Change of performance reporting method from annualised to cumulative returns with effect from July 2020 to provide better clarity and follow common practice by industry players.

Market Review

Malaysian Government Securities yield curve continued to bear steeper during the month in line with global rates movement while BNM decided to maintain the Overnight Policy Rate at 1.75% in the Monetary Policy Committee meeting. Meanwhile, Malaysia was removed from the FTSE Russell Watch List and retain its membership in the flagship World Government Bond Index ("WGBI").

The FBM100 was down 0.2% Month-on-Month on 31 March 2021. The Index performed in line with the MSCI Asia Ex Japan Index, which declined by 0.3% MoM in MYR terms over the same period. Foreigners were neutral with buy/sell flows evenly balanced. Key news during the month included the government unveiled a RM20bn stimulus package, dubbed PERMERKASA, of which RM11bn is a direct fiscal injection.

Market Outlook

With the vaccine rollouts, we expect an expansive reopening of the global economies towards 2H2021, which should lead to a recovery and a reflationary theme. Better growth prospects and potentially higher funding via supply of government bonds for the stimulus measures would keep the yield curve steep. That said, ample liquidity in the domestic financial system remains supportive of the domestic bond market.

Meanwhile for equity, we are cautiously optimistic on the equity markets. An expansive reopening of major economies should lead to a synchronized economic recovery. Globally, monetary and fiscal policies are expected to remain accommodative and supportive. Given the rising long-term yield outlook as economic recovery gathers momentum, funds are expected to rotate into equities from bonds. Domestically, the revival of stalled infrastructure projects, trade diversion into Malaysia from the ongoing US China tension, and the recovery in commodity prices should bolster growth and exports going forward. Downside risks to the market could stem from any delay in roll-out of mass vaccination and uncertainties from the fluid domestic political landscape.
