### Market Review

The MSCI Asia ex Japan Index declined in April as China imposed strict lockdowns due to the flare-up of the Covid-19 cases and amidst concern of an increasingly hawkish stance from the US Federal Reserve. Chinese equities markets corrected due to a more moderate than expected cut to the reserve requirement ratio and the Covid-induced lockdowns particularly in the city of Shanghai. Despite a volatile month, Brent oil closed the month flattish at USD106.6/barrel. It touched USD138/barrel as the European Union's push for a full ban on Russian oil imports gained traction. The oil prices retracted from the highs as China's stringent measures to curb Covid-19 threatened a further hit to economic activity and fuel demand.

The FBMKLCI ("Index") rose by 0.8% Month-on-Month ("MoM") to close at 1,600.43 points on 29 April 2022. The Index outperformed the MSCI Asia Ex Japan Index, which fell by 2.5% MoM in Malaysian ringgit ("MYR") terms over the same period. Foreign investors were net buyers of Malaysian equities amounted to RM826 million in April 2022, bringing the net buy by foreign investors to RM7.3 billion in the first 4 months of 2022. Major news during the month included the Malaysian Communications and Multimedia Commission raising preliminary concerns about market competition that could arise from the proposed merger between Celcom Axiata Bhd and Digi.Com Bhd, announcement by the government to acquire four Klang Valley highway concessionaries, namely Kemas Expressway, SMART Tunnel, SPRINT Expressway and Damansara-Puchong Expressway from the concession holders as well as announcement by Bank Negara Malaysia on the five successful applicants for the digital bank licences as approved by the Minister of Finance Malaysia.

### Market Outlook

The US Federal Reserve's recent decisions indicated its commitment to managing inflation expectations irrespective of uncertainties, and downward pressures on growth have cleared a fundamental market uncertainty. In the near term, investors are assessing the impact of the geopolitical tension between Russia and Ukraine, the surging commodity price shock, and its potential impact on inflation and global growth. With the trajectory of the US Federal Reserve's pathway for rate hikes becoming clear, we are keeping our slight overweight stance on equity. Downside risks to the market could stem from further deterioration and protracted global energy disruption, stagflation, and the new Covid variant. On the flip side, any resolution to the geopolitical tension with minimal disruption to the worldwide energy supply should rerate equities.
