^ Cumulative returns. The performance is calculated on NAV-to-NAV basis.

### Market Review

Malaysian Government Securities ("MGS") yield curve generally steepened during the month as offshore and onshore investors had better buying interest at the short end of the curve on robust 2Q22 growth reported in Malaysia. Despite the volatile global rates markets, the longer end of the curve for local government bonds were well anchored. On the currency front, MYR weakened by 0.69% against the US dollar ("USD") to end the month at MYR4.4828.

On the local equity front, the FBMKLCI index rose 1.32% Month-on-Month ("MoM") to close at 1,512.05 points on 30 August 2022. The Index outperformed the MSCI Asia Ex Japan Index, which grew by 0.36% MoM in Malaysia Ringgit ("MYR") over the same period. In terms of fund flow, retailers turned net buyers and foreign investors remained net buyers while local institutions turned net sellers. During the month, sector wise, key performers were Utilities (+6.7%), Telecommunications & Media (+5.2%) and Financial Services (+1.3%) while key detractors were Health Care (-11.9%), Technology (-5.2%) and Industrial Products & Services (-1.2%).

### Market Outlook

Most global central banks have started to hike policy rates with clear commitments to rein in inflationary expectations leading to an environment of rising interest rates which continue to pressure the valuation for stocks and cap its upside in the near term. Ongoing geopolitical tension between Russia and Ukraine remains unabated with the European Union now committing to restrict energy imports from Russia while sourcing for alternative supplies elsewhere with clear implications for global energy markets and its supply chain. In addition, the recent visit by the US House of Representatives Speaker to Taiwan has resulted in the escalation of US / China tension. Globally, we observe economic headwinds from recessionary fears in the US due to a lack of stimulus momentum in China. Given China's commitment to its zero Covid strategy and the growing domestic property crisis, it is unlikely to see China achieving its GDP growth target. At the corporate earnings level, we expect some earnings revision in the near term to account for slowing top line and margin pressure. In the near term, we are of the view that equities remain volatile as investors continue to assess the US inflationary outlook and the risk of Fed overtightening.
