Market Review

The Malaysian Government Securities (MGS) curve bearish steepened due to buying in the front end and selling in the long end. The shorter end posted gains as players priced in the speculation of rate cut by Bank Negara Malaysia (BNM) in March, while the sell-off of the long end could be due to the relatively larger supply of long dated bonds in the coming month. BNM's Monetary Policy Committee left the Overnight Policy Rate (OPR) unchanged at 3.25% for the meeting on 5 March, considering Malaysia's growth to remain steady and inflation contained. Recently released BNM annual report mentioned GDP growth is expected to range 4.5%-5.5% in 2015 (2014: +6.0%) and headline inflation forecast to average 2%-3% in 2015 (2014:+3.2%). Also, fiscal policy in 2015 will be directed towards strengthening the government's fiscal position in light of low global oil prices. Foreign holdings in MGS in January remained resilient at 43.8%, declined slightly from 44.1% in December. During the month, FBIM100 Index rose 2.1% to end the month at 12,233 points outperforming MSCI Asia ex-Japan which rose 1.2%. The Ringgit initially rebounded by appreciating 2.5% but closed largely unchanged at RM3.61/US\$, possibly on the back of 1MDB solvency concerns. Energy stocks including petrochemicals outperformed on oil price rebound. Telecommunication sector and utilities sector underperformed as risk aversion fell while Tenaga was hit by an unexpected tariff reduction of 5.8%.

On the corporate front, 1) Petronas has named Wan Zulkiflee as its new president and CEO effective Apr 1. Separately, Petronas expects to cut capex by 10% to 15% in 2015/16, while opex will be cut by 30% this year. 2) MISC and Petronas have agreed to build new LNG carriers worth RM4b, to be delivered from 2016 onwards. 3) P Chem has teamed up with BASF SE to build a new production plant with a total capacity of 30,000 tonnes p.a. 4) IJM Corp has secured RM1.19b contract from Kuantan Port to construct a new deepwater terminal. MSCI Asia ex-Japan index was up 1.2% in MYR term as low crude oil continues to drive expansion in developed nations.

Market Outlook

For fixed income, In the near term, Ringgit bonds are likely to steepen with belly to long end of the curve will see some weaknesses, taking cue from higher US Treasury yields. However, buying interest will be seen in the short end of the curve due to the short supply of bills. Market players will continue tracking economic data out from the US for sign of early hiking of rates by the Fed which remains as one of the most influential external drivers for Malaysian bond market.

For equity, in the short run, the sentiment on local equities is expected to be weighed down by the falling oil prices and the Ringgit. Over the long run, we expect market to rebound led by recovery in oil prices, government's effort to reduce fiscal deficit, improvement in exports aided by improving prospects of developed economies as a result of lower oil prices and attractive valuations.

We maintain our preference of North Asia over ASEAN in the longer term as recovery in US and Europe will benefit exporters in North Asia.
