*Note: Change of performance reporting method from annualised to cumulative returns with effect from July 2020 to provide better clarity and follow common practice by industry players.

Market Review

Malaysian Government Securities generally weakened in May 2021, following Bank Negara Malaysia’s decision to maintain the Overnight Policy Rate at 1.75% in the Monetary Policy Committee meeting. Market sentiment was dampened by the implementation of another nationwide Movement Control Order (“MCO”), Malaysian ringgit weakened by 0.91% against the greenback to close the month at MYR4.1252.

The FBM100 fell by 2.2% Month-on-Month on 31 May 2021. The Index underperformed the MSCI Asia Ex Japan Index, which rose by 1.9% MoM in Malaysian ringgit terms over the same period. In May 2021, foreign flow in Malaysian equities was negative with a net sell of MYR0.2 billion. Notable news during the month included the re-imposition of “MCO” which started in Selangor and Kuala Lumpur on 6th and 7th of May 2021 respectively with inter-district travels banned nationwide from 10th May onwards. Meanwhile, in Asia, India was the top performing market as the local equities market rebounded strongly after the recent dropped in deadly Covid-19 cases. The Chinese equities market posted modest gain during the month amid regulatory tightening in the technology and education sectors.

Market Outlook

With the vaccine rollouts, we expect an expansive reopening of the global economies towards 2H2021, which should lead to a recovery and a reflationary theme. Growth prospects and potentially higher funding via supply of government bonds for the stimulus measures would continue to weigh on the yield curve. That said, ample liquidity in the domestic financial system remains supportive of the domestic bond market.

Meanwhile for equity, an expansive reopening of major economies should lead to a recovery. Globally, monetary and fiscal policies are expected to remain accommodative and supportive. Given the rising long-term yield outlook as economic recovery gathers momentum, funds are expected to rotate into equities from bonds. Domestically, the revival of stalled infrastructure projects, trade diversion into Malaysia from the ongoing US China tension, and the recovery in commodity prices should bolster growth and exports going forward. Downside risks to the market could stem from any delay in roll-out of mass vaccination and uncertainties from the fluid domestic political landscape.
