^ Cumulative returns. The performance is calculated on NAV-to-NAV basis.

*Note: Change of performance reporting method from annualised to cumulative returns with effect from July 2020 to provide better clarity and follow common practice by industry players.

Market Review

Malaysian Government Securities ("MGS") yield curve bear-flattened in Oct 2021. Domestic bond market sentiment remained cautious as it was a heavy auction month, couple with rising US Treasury ("UST") yields and the national Budget 2022 announcement at end-Oct 2021. On the currency front, MYR strengthened by 1.1% against the greenback to close the month at MYR4.1403.

The FBM100 ("Index") rose by 1.7% Month-on-Month ("MoM") and outperformed the MSCI Asia Ex Japan Index, which rose by 0.2% MoM in Malaysian ringgit ("MYR") on 29 October 2021. During the month, foreign investors were net buyers of RM1.6bn of Malaysian equities. Notable news flows during the month include Budget 2022 which projects a limited fiscal consolidation - fiscal deficit of 6% of GDP (2021: 6.5%) and a GDP growth of 5.5-6.5% in 2022 (2021/22: 6.7%/6.0% previously) and the imposition of the one-off 33% income tax rate for profits exceeding RM100m in 2022 has dampened FY22F earnings growth outlook for stocks in Malaysia.

On Asia ex Japan market, the Hong Kong, Indonesia and Singapore equities markets were the top performers in the region. Among the Hang Seng Composite Index sectors, Information Technology was the best performer, while Healthcare fared the worst. Top performers in the index were auto OEMs BYD and Geely, which continued to record robust monthly sales figures.

Market Outlook

Given the economic recovery is partially reflected in the equity market, investors are currently watching the macro data closely to gauge the strength of inflationary pressure and the timing of a QE tapering. Investors will continue monitoring Covid-19 situation following the recent resurgence in positive cases and the emergence of new variants. The recent regulatory changes, property crisis and power crunch in China are likely to dampen the near-term economic growth outlook.

Meanwhile, global monetary and fiscal policies are expected to move into tapering and less accommodative mode in the medium term. Nonetheless, equities remain the preferred asset class given the expectation of bond yield resuming its upwards trend upon US Fed tapering later part of the year. We prefer developed markets over emerging markets for now.
