Market Review

Malaysian Government Securities ("MGS") yield curve bear flattened tracking global rates movement after the 75 basis points ("bps") rate hike by the US Federal Reserve ("Fed") at the June Federal Open Market Committee ("FOMC") meeting. The yields of 3-year, 5-year and 10-year MGS rose to 3.51% (+5bps), 3.96% (+21 bps) and 4.26% (+6 bps) respectively as of end-June 2022. Malaysia's Consumer Price Index accelerated to 2.8% year on year ("YoY") in May 2022 (April 2022: +2.3% YoY) while core inflation rose for the eighth consecutive month at 2.4% YoY in May 2022 (Apr 2022: 2.1%) indicating a rising price trend.

In the equity space, the FBMKLCI ("Index") fell by 8.02% Month-on-Month ("MoM") to close at 1,444.22 pts on 30 June 2022, underperforming the MSCI Asia Ex Japan Index, which fell by 4.48% MoM in Malaysian ringgit ("MYR") terms over the same period. Foreign investors were net sellers of Malaysian equities totalling RM1.3 billion during the month while retailers and local institutions turned net buyers. After a volatile first quarter, global markets ended May broadly flat despite significant intra-month volatility. Key macro risks such as the war in Ukraine (with no clear sign of resolution), hawkish central bank policy and China's covid restriction continue to dominate headlines. Both the MSCI World index and S&P 500 gained 0.2% for the month while the MSCI Emerging Market index rose 0.5%. US headline inflation for May came in higher than expected at 8.6%, hitting a high since 1981. As a result, the Fed raised interest rate by 75 basis points (bps) in its June meeting and the rate is expected to hike between 50-75 bps in the next meeting to combat inflation.

Market Outlook

Apart from Japan, global central banks have started to hike policy rates with clear commitments to rein in inflationary expectations leading to an environment of rising interest rates which would put pressure on the valuation for stocks. Ongoing geopolitical tension between Russia and Ukraine remains unabated with EU now committing to restrict energy imports from Russia while sourcing for alternative supplies elsewhere with clear implications for global energy markets and supply chain. Recent US inflation data raised expectations of further interest rate hikes by US Federal Reserve which resulted in heightened market volatility and increased risk aversion among investors.
